TRACK

SECURE CHAIN OF CUSTODY

Smart Biomedical Waste Tracking & Compliance Platform

Automated barcode generation, integrated mobile weighing, and real-time digital auditing for modern healthcare facilities.

Product **V1.2**

Focus **Compliance & Security**

Powered by **Cloud Integrations**

Reimagining Waste Logistics

Traditional biomedical waste workflows suffer from high manual overhead, compliance risks, missing data, and critical auditing delays. EcoTrace provides a modern digital alternative.

Traditional Drawbacks

- ✗ Manual ledger entries prone to errors
- ✗ No GPS verification of pickup events
- ✗ Difficult to detect waste leakage in transit
- ✗ Compliance audits take days to reconcile
- ✗ Paper receipts get damaged or lost

The EcoTrace Standard

- ✓ Automated unique QR-barcode printing
- ✓ GPS verified coordinates at check-in
- ✓ Bluetooth scale integration for auto weight
- ✓ Instantly reconciled transit metrics
- ✓ Secure, immutable digital certificates

Guaranteed Chain of Custody

EcoTrace enforces a strict ****digital handshake**** at every handover node. From the moment the healthcare facility labels a waste bag, through transit check-in, and final treatment processing, every action is timestamped, scanned, and verified. Discrepancies are flagged immediately, preventing environmental leaks and ensuring absolute regulatory alignment.

Designed for Collaboration

EcoTrace is structured into three dedicated modules, delivering targeted, high-performance interfaces for all stakeholders in the waste lifecycle.

1

Healthcare Facility Portal (HCF)

Hospitals generate waste bags inside the portal, print dynamic color-coded QR labels (Yellow, Red, Blue, White), review dispatch manifests, and download official disposal certificates once processing completes.

2

Driver App (Mobile Optimized)

A responsive web application enabling field collectors to perform GPS check-ins at facility nodes, scan QR labels with their phone cameras, record weights directly via Bluetooth scales, and sync queue data offline.

3

Common Treatment Facility Dashboard (CBWTF)

Plant managers log gate receipts, reconcile inbound shipments against driver route sheets, group bags into processing batches (Autoclave, Incinerate), and issue cryptographically backed disposal certificates.

Centralized Operations Hub

The EcoTrace Admin Dashboard provides facility heads with an overview of active routes, critical compliance discrepancies, and historical waste volumes.

Key Features: Recharts integration for visual weight distribution trends, live route sync monitoring, and HCF registry maps.

Every waste bag generated by an HCF receives a unique tracking profile. Handover status update events (Created, Transit, Received, Treated) are recorded instantly.

On-the-Road Field Operations

Drivers handle collections via mobile check-ins and built-in camera scanning. Collected items are saved locally and synced automatically as connectivity changes.

Key Features: Offline sync queues, real-time online/offline banners, HTML5 QR camera decoding, and Bluetooth weight scale pairing.

Built for Scale & Trust

Leveraging modern architecture to ensure fast updates, military-grade data security, and seamless integration with existing IT infrastructure.

Premium Tech Stack

Developed using top-tier frameworks to offer smooth page loads and zero downtime.

Regulatory Compliance

- ✓ Aligned with BMW Rules 2016
- ✓ Strict 4-color categorization rules
- ✓ Fully auditable ledger reports
- ✓ Real-time GPS log trail mapping

Upgrade Your Compliance Today

Deploy EcoTrace within your facility network to eliminate waste discrepancy leaks, digitize logs, and automate regulatory reports.
